- **Post Doctoral Research Experience:** During postdoctoral research at the University of South Florida, USA, worked on industry-sponsored projects for Transform Pharmaceuticals Inc., (a Johnson & Johnson company), USA. The work focused on the invention of novel solid forms of APIs, including the rational design, synthesis, and advanced characterization of pharmaceutical co-crystals to modulate and optimize physicochemical properties of APIs. Developed crystallization processes of various APIs to obtain the target polymorph and/or particle size. Authored a book chapter, a review article, and several peer-reviewed research publications in high-impact journals (see Publications list). Additionally, mentored graduate students contributing to their PhD research programs.

- **Doctoral Research Experience:** Doctoral research encompassed multi-stage organic synthesis, purification, comprehensive material characterization, and crystallization studies. The work focused on the invention of novel solid forms, including polymorphs and co-crystals, supported by advanced solid-state characterization techniques. Developed expertise in single-crystal growth, single-crystal X-ray diffraction data collection, structure solution, refinement, and three-dimensional crystallographic analysis. Performed computational stability studies of polymorphs and implemented polymorph prediction methodologies using Cerius2 and Materials Studio.

- Demonstrated strong command of computational tools for structural analysis, including Cerius2, Materials Studio, X-Seed, Mercury, XP, and PLATON, along with energy calculations using Cerius2 and Spartan, and polymorph prediction using the polymorph-predictor modules in Cerius2/Materials Studio.
- Extensively utilized the Cambridge Structural Database (CSD) for the rational design of novel solid forms; installed, managed, and operated CSD on both UNIX-based systems (QUEST) and Windows platforms (CONQUEST).
- Accumulated six years of hands-on experience working on UNIX-based Silicon Graphics workstations, including Octane2, O2, and Indigo, supporting computational modelling and crystallographic analysis.
- Developed strong expertise in conducting solubility profiling, metastable zone width (MSZW) studies, and crystallization process development for APIs to support solid-form selection and robust process design.
